

# Why Upgrade Your Furnace?

**Start Saving up to \$900 per Year in Energy Costs – that's \$75/Month!\*** – When comparing a new furnace that's 90-92% energy efficient with one that's 60-65% energy efficient (a typical 10-15 year old furnace) it's easy to see that your current furnace is wasting your money.

AFUE = Annual Fuel Utilization Efficiency (a fuel efficiency measurement for furnaces similar to gas mileage for cars)

\* Actual savings may vary depending on the weather patterns in your local area, local fuel rates and your individual lifestyle.

**Receive up to \$1,225 in rebates just to replace your furnace!!** - Thousands more are available depending upon which equipment you upgrade. The Ontario Power Authority and Federal and Provincial Government are offering incredible mail in rebates when you upgrade your home comfort equipment to ones that are more energy efficient.

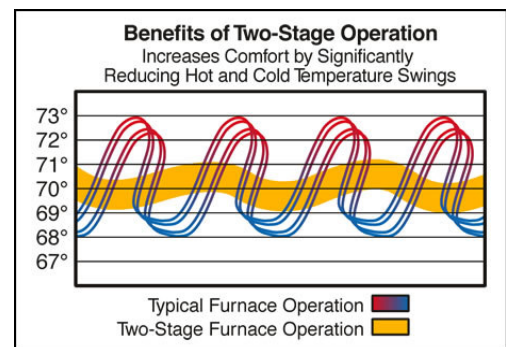

**Remove that gas guzzler from your basement** - About 30% of the heat being created by your current mid efficient furnace is being wasted because it is being vented outside (when it could be heating your home!). High Efficiency furnaces have a secondary heat exchanger to utilize this (previously wasted) heat – the result is much lower gas costs.

**Be more comfortable in your home** - Choose a 2-stage model which significantly reduces hot and cold temperature swings in your home and is designed for quiet, smooth operation. The more heat needed, the higher the burner input and vice versa. No matter what the temperature is outside, the burners adjust their input to provide optimum warmth and even heat distribution.

**You won't believe the difference in comfort!**

**Lower your Electricity Bill by up to 26%** - Your furnace fan is used all year long so it's important that the motor driving this fan use a minimum of electricity.

**Be prepared for higher electricity rates from Smart Meters** – When Time-of-Use rates go into effect, you'll be paying almost twice your normal electricity rate to run your furnace. Doesn't it make sense to ensure your furnace is energy efficient?

**Don't Delay! Call MetroAir Today!**
